

Amendment under 37 C.F.R. § 1.111
USSN 09/582,292

the top end of each member is connected with the cylindrical wall (2).

2. (Amended) A container according to Claim 1, wherein the members (6) are linked with the hemispherical wall (7), in the direction of a central pole (10) of the hemispherical wall (7), in a roughly tangential manner.

3. (Twice Amended) A container according to Claim 1, wherein the members (6) are linked with the hemispherical wall (7), in the direction of a central pole (10) of the hemispherical wall (7), in immediate proximity of the hemispherical wall (7).

4. (Twice Amended) A container according to Claim 1, wherein the curve radius (R) of the hemispherical wall (7) is between 80% and 120% of the radius of the cylindrical wall (2).

5. (Twice Amended) A container according to Claim 1, wherein a clearance is provided between the central pole (10) of the hemispherical part and a supporting surface (11) of each member (6).

6. (Twice Amended) A container according to Claim 1, wherein the top end of the members (6) is linked with the cylindrical wall (2) in an almost tangential manner.

7. (Twice Amended) A container according to Claim 1, wherein it furthermore comprises a shoulder (3), a collar (4) and a neck (5) provided with means which make it possible to close it by means of suitable device.
